Based on the database design you created for the project, make database Models, migrations and database seeds if necessary for your project.

Creating Models
Using Laravel Artisan tool create models with the following command:

```
php artisan make:model YourModelName
```

Creating Migrations
Using Laravel Artisan tool create migrations with the following command:

```
php artisan make:migration create_examples_table
```

Please note, that database table names are plural. If you are creating a pivot table, make sure to name it singular, and arrange them in alphabetical order. Example of pivot table migration command is below:

```
php artisan make:migration create_assignment_example_table
```

Creating Seeds
Using Laravel Artisan tool create seeds with the following command:

```
php artisan make:seeder ExampleTableSeeder
```

Please update your fork of *NYU-CS6015/Programming-Assignments*. Place your:

- Database migrations
- Models
- Database seeds, if applicable

files in **Programming Assignment 5** directory. **Do not forget to commit** your programming assignment!

No need to create pull requests.
